

Enviroscape Available for Free Classroom Demonstrations!

Freehold Soil Conservation District offers a free classroom presentation on raising awareness of non-point source pollution (sometimes called "People Pollution") and watersheds. The Enviroscape is a visual, hands-on tool that demonstrates how water pollution results from everyday activities such as fertilizing the lawn, walking your dog, changing motor oil and littering. When it rains, pollutants are washed into storm-drains that flow to our streams, rivers, lakes, and ocean. Students will learn how everyone in their communities can reduce non-point source pollution and have healthier watersheds.

Demonstrations are available for grades K-8 in Middlesex & Monmouth Counties. To schedule an Enviroscape demonstration for your class please contact Holly Reynolds, Education Coordinator, at Freehold SCD at (732) 683-8500 or email at hreynolds@freeholdscd.org. Demonstration time = approximately 40 minutes. The Enviroscape Model can be borrowed too.

The Enviroscape interactive model dramatically demonstrates sources of water pollution - and its prevention!
